Basic data

Engine model	12M26G2N0/5
N° of Cylinders / Valves	12/48
Cylinders arrangement	V-engine
Bore x Stroke (mm)	150x150
Displacement (L)	31.8
Mean Piston Speed (m/s)	7.5
BMEP (Bar)	13.8
Fuel	Pipeline Natural Gas - MN ≥ 85
Cooling System	Liquid (water + 50% antifreeze)
Injection System	Open Chamber
Fuel System	Lean Burn Spark Ignited
Aspiration	Turbocharged and Aftercooled
Compression ratio	11 : 1
Flywheel housing	SAE 0
Flywheel	18"
N° of teeth on flywheel ring gear	178
Inertia of flywheel (kg/m ²)	6.95
Inertia of crankshaft (kg/m ²)	1.47
Emission	N/A
Overall Dimensions without radiator (Length x Width x Height) (mm)	2692x1524x1761
Engine dry weight (without radiator) (kg)	2910
Engine wet weight (includes oil, coolant) (kg)	3116
Max ambient temperature restriction (°C) ¹	45

¹ The indicated value is based on an ATB value of 40°C for an engine tested at 100% of the COP Power, in an open condition, without an enclosure or container, without any airflow obstruction in the front of the radiator, without air recirculation, with free exhaust gas exit and with the engine thermostatic valve in its full open condition, without a closing plate present.

Ratings definitions

Emergency Standby Power (ESP)

Emergency Standby Power is the maximum power available for a varying load for the duration of a main power network failure. The average load factor over 24 hours of operation should not exceed 70% of the engine's ESP power rating. Typical operational hours of the engine is 200 hours per year, with a maximum usage of 500 hours per year. This includes an annual maximum of 25 hours per year at the ESP power rating. No overload capability is allowed. The engine is not to be used for sustained utility paralleling applications.

Prime Power (PRP)

Prime Power is the maximum power available for unlimited hours of usage in a variable load application. The average load factor should not exceed 70% of the engine's PRP power rating during any 24 hour period. An overload capability of 10% is available, however, this is limited to 1 hour within every 12 hour period.

Continuous Power (COP)

Continuous Power is the maximum power available for an unlimited period of use at a constant load factor. No overload capability is allowed.

- 1) All ratings are based on operating conditions under ISO 8528-1, ISO 3046, DIN6271. Performance tolerance of ±5%.
- 2) Test conditions : 100 kPa, 25°C air inlet temperature, relative humidity of 30%. Derating may be required for conditions outside these; please contact the factory for details.
- 3) Power output curves are based on the engine operating with fuel system, water pump and lubricating oil pump; not included are battery charging alternator, fan and optional equipment
